

**Customer:**  
MTCC #600

**System:**  
Domestic Hot Water  
System

## Problem

Multiple pinholes were draining the budget for this corporation and creating endless disputes between the condo and the commercial store on the ground floor.

## Solution

CPL was called in to apply our non-evasive pipe lining technologies, the process was within the budget of this older high rise, and proved to be a viable solution!

## How did we do?

“From start to finish, the renovation of our hot water domestic distribution system took approximately 6 weeks. Minimum disruption was caused to our unit owners, communication was important to both sides, and for our unit owners the entire process was neat and tidy. CPL went out of their way in correcting plumbing errors and working from as built plans that weren’t always where things should have been.”
