Domestic Hot Water
System

Problem

Multiple pinhole leaks were a nightmare to repair, surrounded by plaster and wire mesh, these pinholes were not easy to get to, this building was experiencing 3-4 a week!

Solution

CPL was called in to apply our engineered epoxy system to rejuvenate the hot water risers and horizontal mains. This project proved to be within budget for the building and saved the hassles of breaking through all that wire mesh and plaster walls. Peace of mind, guaranteed!

How did we do?

"I was particularly impressed with the immediate response to minor issues that arose during the project and the efforts taken by Gianpaul to resolve the matters to the satisfaction of Management, as well as the Board of Directors. We particularly appreciated the willingness of Canada Pipe Lining to work with our tender specifications, as well as their willingness to work with a CCDC Contract."
