

Customer:
YCC#520

System:
Domestic hot water system experiencing pinholes on the riser pipes and branch lines. The upper floors were customer built and had copper lines running in every different direction.

Problem

The suites in this prestige high rise range from 2 million and up and are fitted with oak panels and wall to wall ceilings. Pinhole leaks were popping up all over the building and starting to be a major inconvenience for the home owners.

Solution

The board of director's proactive thinking brought them to contract out CPL to apply their pipe lining technology throughout the hot water and recirculation system creating a permanent barrier between the pitting copper and hot water, eliminating the pinhole leaks for good and providing a 50 year design lifespan.

How did we do?

"We found the principles of Canada Pipe Lining Technologies Ltd to be extremely knowledgeable in all aspects of the process. The staff members who worked in the building during the project were very punctual, courteous and congenial to all of the residents that they came in contact with during this project."

Geoff Toy Assistant Manager – YCC #520
