

Customer:
Humber College

System:
Domestic Hot Water System

Problem

Constant pinhole leaks were causing major inconveniences for the residence. With repairs happening frequently throughout the month the facility management needed a less evasive solution.

Solution

CPL was called in to rejuvenate the main recirculation riser once and for all, eliminating the need to access the concrete shaft on each floor. The project was completed within the week and was within the budget of the college.

How did we do?

“After experiencing a number of pinhole leaks in 3 different building at Humber College, the services of CPL Technologies were requested to provide Pipe Lining to the Main Recirculation Risers, and Domestic Hot Water Risers. Humber College was impressed with the project management approach, strategy, and performance of CPL Technologies. CPL made this project seamless with minimal disruptions. Key objectives were established on time, and the professionalism was clearly transparent.”

John Schroeder – Maintenance Manager Humber College
