

Customer:
Lake Ridge School

System:
Main Sanitary Sewers

Problem

The old building was falling victim to major pipe failure. Collapsed pipes out on the roadways were causing sewage and grease backups into the school making it a hazard and having to evacuate the school on some occasions. The pipes were cast iron and were experiencing root intrusion and loss of integrity.

Solution

CPL came to the rescue of this old school during the summer months. The pipes were cleaned with our heavy duty jetters and snaking equipment followed by a video inspection to ensure an efficient installation of our liners. Once the liners were installed on the 8" and 10" mains the pipes were tested for integrity and final inspections showed a flawless job, no more cancellation day kids! Sorry!

How did we do?

"Thankfully for CPL's pipe lining technology and their excellent technicians we were able to do this repair within budget and eliminate the need to excavate our front yard just before the school year began"

Maricela Riddoch, P. Eng. | Project Engineer Lake Ridge School
